Subject: One more requested revision to Class V Permit

Hi Valois,

Powertech has requested the following change to the Class V Permit related to major modifications:

Requested Change:

Powertech requests the following language be added to III.C.2 to allow for changes in well construction throughout the duration of well performance in accordance with the regulation: "The permittee has the flexibility to make changes in construction by means of a minor modification with the approval of the Director as long as the resulting Class V well construction is consistent with Federal UIC regulations and Part III of this Permit and so long as no change is made prior to approval by the Director. Allowable minor modifications include, but are not be limited to, adding perforations in the permitted injection zone and running a liner."

Ex. 5 Deliberative Process (DP)

"After initial well construction is complete, any subsequent changes in well construction other than the addition of perforations to an approved injection zone in accordance with Part IV, Section F.3 will require a major modification of this Area Permit according to 40 CFR § 144.39 and § 124.5."

Ex. 5 Deliberative Process (DP)

Thanks.
